Date Name Class & Section Roll No. **1. Read the passage given below carefully and answer the questions that follow.***How to Ensure a Good First Impression*

1. Times of India: What is the first thing you notice about anyone? Remember the same is probably also the first thing others note about you. First impressions are established in the first seven seconds of seeing someone, say experts. People form 90% of their impression of a person in the first four minutes, most of which is actually clinched in the first seven seconds. Appearances do matter, the looks we are born with (height, weight, skin colour), but also how we dress and groom ourselves (look clean and well put-together); and even more, how we project ourselves through our body language. Posture and the way we walk are an important part of body language. When someone strides into a room with confidence, shoulders held back and head held at a confident angle, he/she is bound to attract attention and portray the image of a successful, confident person everyone would like to interact with and acknowledge. This is the posture and walk of success and celebrity, and brings with it positive energy and magnetic vibes.
2. On the other hand, someone who slinks in and looks ill at ease makes others uncomfortable too and will probably be ignored and left out of conversations. This person is projecting a loser attitude through his/her discomfort and negativity.
3. In order to leave a good impression, keep an open body position. Show an interest in people and smile sincerely when you meet someone. Maintaining eye contact is an important indicator of the interest you take in another person. It shows you as an intelligent, trustworthy and alert person. Shifty eyes or refusing to meet another person's eyes seems insincere and unattractive. When listening to someone, a slight tilt of the head is very effective and shows trust and interest.
4. Immediate killers of a good impression are a hesitant walk, dragging feet, sitting with a slouch, shifty eyes, a weak hand-shake or even hanging on to a person's hand too long (just hold it for 2 seconds). Standing too close to stranger can seem threatening (keep a distance of at least 4 feet). Don't cross your arms or keep your hands in your pockets. Clenched fists indicate hidden anger or fear. Do not point or shake your finger at someone nor hold up your palm. These are aggressive gestures, as are hands on hips.
5. Constantly checking your phone or playing with your hair, tapping your foot or making other distracting noises is rude social behaviour and indicates discomfort and anxiety. Body behaviour expert Allan Pease suggests that we must appeal to the reptilian part of people's brains-the ancient part we are born with to recognize danger. As such, one must have an open body language. It is important to show your teeth when you smile, says Allan, because this exposes your non-intimidating, vegetarian teeth, like chimps or monkeys. Allan also recommends the eyebrow flash-a gesture that says, 'I see you, I notice you.'
6. The key then, it seems, is in appearing non-threatening and sincere. Ensuring that you send the right signals through body language can make or break the first impression, which as they say is often the last.

(i) On the basis of your reading of the passage, prepare a list of do's and don'ts to ensure a good first impression.

Do's	Don'ts

(i) Answer the following questions briefly.

(a) How much time does it take to establish first impressions according to experts?

.....

.....

.....

(b) What is the reptilian part of people's behaviour?

.....

.....

.....

(c) What is eyebrow flash?

.....

.....

.....

(d) What are the three things that matter for a good impression?

.....

.....

.....

Date Name Class & Section Roll No. **2. Read the passage given below carefully and answer the questions that follow.***One for the Jungle*

1. The Tribune: There are reasons galore as to why she is known as the Tiger Princess. At 36, Latika Nath, is the first woman to have been awarded a doctorate in tiger conservation. She studied under the famous biologist David Macdonald at the Oxford University. An expert in tiger conservation and management in India, she turned author with the children's book, Takdir, the Tiger Club, which has been translated into 28 foreign languages. National Geographic channel has featured her passion for wildlife in the documentary The Tiger Princess.
2. Studying and researching on wildlife is a dream she has nurtured since childhood. Her father introduced her to the importance of environment conservation early on. "Realising my interest in ecology and wildlife, a friend suggested that I should pursue doctorate in tiger conservation as little scientific research had been done on the subject," says Latika Nath. Gradually, she widened her horizons and took to several other projects. From developing a strategy for the conservation of the wetland ecosystems in Nepal to studying the Ganga dolphins to researching the effect of animal migration in the Kanchenjunga region, Latika has done it all.
3. Here isn't a regular nine-to-five job, where you reach office, put your head to work and earn a living. From dawn to dusk, she would be in the jungle with dry rations to put her experience on paper later at night. "A few days' work would extend into weeks. One has to eat judiciously and protect oneself from mosquito and insect bites," Latika says. She takes all challenges in her stride if she manages to discover something conclusive about an animal's behaviour. It is tough to live in jungle during extreme summer and winter, but impossible in monsoons, the only season Latika has to sit at home.
4. She has been to several countries that boast of a rich wildlife. There she learnt about how people and authorities conserve their flora and fauna. She rues that it is still not a priority in India. "There has always been a huge gap between the centre and the state policy on wildlife. The interest of animals is unfortunately never important to political parties as they aren't their vote bank."
5. The recent deaths of the Gir forest lions is a case in point. "The Gujrat government isn't ready to send its lions outside the state. The lions need a second habitat in some other state to survive in case of any disease breakout. She wants each state to take pride in its wildlife. Punjab is home to a variety of birds and now even dolphins (at Hari-Ke-Pattan) and we must promote these facts to generate the interest of the next generation in wildlife. "Only then will our wildlife be rich and the ecological balance be maintained."
6. She terms poaching as the real threat to wildlife. "Poaching still exists. Despite strict laws and stringent punishments, animals are killed for their skin, horns, tusks and claws. Until people are taught that wildlife is indispensable for our ecology, this will go on," adds Latika.

(I) Answer the following questions briefly.

(a) Write any two reasons why Latika is called the Tiger Princess.

.....

.....

.....

(b) Why did Latika's friend suggest her to pursue her doctorate in tiger conservation?

.....

.....

.....

(c) Name the projects taken up by Latika, mentioned in the passage.

.....

.....

.....

(d) How is Latika's job different from an office job?

.....

.....

.....

(e) How are people of other countries different from the Indians regarding wild life?

.....

.....

.....

(e) What are animals poached for?

.....

.....

.....

(ii) Find words from the passage which mean the same as the following:

(a) a place where a particular plant or animal is generally found (Paragraph 5).....

(b) illegal killing of animals (Paragraph 6).....

(c) something which is too important to do without (Paragraph 6).....

3. Read the passage given below carefully and answer the questions that follow.

Fixed Bedtime, Sufficient Sleep May Lead to Healthier Teens

1. Hindustan Times: According to a recent study, having a fixed bedtime and getting sufficient amount of sleep from early childhood may lead to a healthy body weight in adolescence. The results of the study were published in the journal 'Sleep'. The researcher at Penn State identified groups of children by bedtime and sleep routines and tested longitudinal associations for each group with adolescent body mass index (BMI). The findings suggest that childhood bedtime and sleep routine groups predict adolescent sleep patterns and BMI. In a national study of urban households, one third of children consistently adhered to age-appropriate bedtimes for age five to nine. Those who had no bedtime routine at the age of nine had shorter self-reported sleep duration and higher BMI at the age of 15 when compared to those children with age-appropriate bedtimes (after adjusting for age 3 BMI).
2. "Parenting practices in childhood affect physical health and BMI in the teenage years. Developing a proper routine in childhood is crucial for the future health of the child. We think sleep affects physical and mental health and the ability to learn," said study co-author Orfeu Buxton. Bedtimes should be determined by several factors, such as when the child has to wake up based on the time it takes for that child to get ready for school, and the time it takes to get to school, as well as the school start time. School start times aren't determined by the parents, but bedtimes routines can be adjusted by parents, suggested Buxton.
3. "Giving children the time frame to get the appropriate amount of sleep is paramount as achieving a recommended duration of sleep can have an impact on BMI in adolescent years, according to the findings", added Buxton. The study stated the bedtime should provide enough of a window for the child to get an appropriate amount of sleep, even if the child doesn't fall asleep right away.
4. Soomi Lee, lead study author, stated that the study highlights the importance of educating parents in bedtime parenting, especially for those in low-income households..... "In our sample that includes a large proportion of low-income, low-education, and ethnic minority households, only less than one-third of children had age appropriate bedtime routines at age 5 and 9. This raises a concern about the development and health of children in disadvantaged households. Future family interventions may need to include parental educations about sleep health, particularly focusing on parents with low income and low education," said Lee.

(i) Answer the following questions briefly.

(a) What do the findings of the study suggest?

.....

.....

.....

(b) What is Buxton's view about sleep?

.....

.....

.....

(c) Why should children be given the time frame to get the appropriate amount of sleep?

.....

.....

.....

(d) What does the sample include?

.....

.....

.....

(e) What does the study highlight?

.....

.....

.....

(ii) Fill in the blanks to complete the sentences taking information from the passage.

(a) The results of the study were published.....

(b) The study was conducted at.....

(c) Physical health andin the teenage years are affected by.....

.....in

(d) The study raises a concern.....

4. Read the passage given below carefully and answer the questions that follow.

Career in Aeronautics

Aeronautical science is one of the most exciting scientific expeditions of humanity. You can opt to be involved either with aircraft or with missiles and weapon systems if you choose this path. Aeronautic science covers everything from the design of planes to research on improving flight safety, fuel efficiency, speed and weight, or reducing systems costs and using advanced technologies to meet customer needs. You can also choose to look after the maintenance of existing aircraft, whether fighter or commercial. Increasingly, aeronautical scientists are doing research on reducing the damaging impact of air travel on the environment.

All paths towards this career would begin with excelling in mathematics and physics. Within mathematics, learn advanced concepts in geometry and algebra. Geometry will help you determine and understand flight paths and read maps better, while algebra will help you solve complicated tasks like designing the correct angles and weights needed for aircraft and missiles. Aeronautics will also require you to read a lot of theory, so you should be good at languages also. The convergence of material science with aeronautics is imminent and hence knowledge of different lightweight materials and their properties is essential. You should also develop a keen attention to detail; not even minor flaws should go unchecked under your supervision.

Air traffic has doubled every fifteen years in the recent past, and is expected to double again in the next fifteen years. By 2032, it is expected that there will be 6.7 billion fliers annually across the world with about 33,000 commercial aircraft in operation, both figures almost doubling from the current numbers. The shift will be towards large, wide-bodied, fuel efficient jumbo carriers. Moreover, since aircraft are generally replaced in fifteen to twenty years, there will be a significant demand for replacement of the existing fleets.

On the military side, the air force is the way forward for all major armed forces including India. The future will see air-based unmanned drones and missiles, with industries developing around these applications.

All forms of aeronautical applications will open new avenues for five major careers:

(i) Aeronautical Engineer: This career path involves research, design, development, maintenance and testing the performance of civil and military aircraft, including weapons and satellites. Such engineers are developed by aircraft manufacturers such as Boeing, Airbus, Hindustan Aeronautics Ltd, India's Aeronautical Development Agency and NASA.

(ii) Aeronautical Researcher: These scientists are the ones who break barriers and develop new technologies, materials and fighter technologies which constantly transform the way aircraft fly. They are developed by aircraft manufacturers and also leading universities as part of their research in aeronautics.

(iii) Aeronautical Designer: These are the people who work on the finer details of the aircraft, including designing and testing shapes and components. These experts are usually developed by aircraft and aircraft component manufacturers.

(iv) Aeronautical Maintenance Technician: These are a set of highly-trained experts who ensure that aircraft are ready to fly the next morning; they perform necessary repairs on them. They typically work with airline companies.

(v) Aeronautical Consultant: These are the people who are experienced at providing business or technical solutions to airline operators, aircraft manufacturers, pilots or aviation policymakers. They may also be experts in airport management, fuel management and safety audits. They may be involved in testing and recording results for new experiments. Most aeronautical consultants must be registered with an accredited consultancy firm. Typically they work across all sub-sectors of aviation, including manufacturers, operators, military and academic institutions.

(i) Answer the following questions briefly.

(a) What are the two options available for aeronautical science?

.....

.....

.....

(b) How will the doubled air traffic affect the demand? Write two things which would be required.

.....

.....

.....

(c) Write the names of three subjects one must master in order to study aeronautics.

.....

.....

.....

(ii) Match the information given in Column-A with Column-B.

Column-A	Column-B
1. testing the performance of civil and military aircraft	aeronautical researcher
2. airport management, fuel management and safety audits.	aeronautical designer
3. highly-trained experts involved in repairing	aeronautical consultant
4. minute details of the aircraft	aeronautical engineer
5. development of new materials and fighter technologies	aeronautical maintenance technician

5. Read the passage given below carefully and answer the questions that follow.

Six Blind Men: A story re-told by Phil Shapiro

Once upon a time, in a faraway land, there lived six blind men. Each of them was very wise. Each of them had gone to school and read lots of books in Braille. They knew so much about so many things that people would often come from miles around to get their advice. They were happy to share whatever they knew with the people who asked them thoughtful questions. One day these six wise blind men went for a walk in the zoo. That day the zoo-keeper was worrying about all of her many troubles. The night before she had had an argument with her husband, and her children had been misbehaving all day long. She had so much on her mind that she forgot to lock the gate of the elephant cage as she was leaving it.

Now, elephants are naturally very curious animals. They quickly tried to push the gate of the cage to see if it might open. To their great surprise, the gate swung freely on its hinge. Two of the more daring elephants walked over to the gate. They looked left and right, and then quietly tip-toed out of the cage. Just at that moment the six blind men walked by. One of them heard a twig snap, and went over to see what it was that was walking by.

"Hi there!" said the first blind man to the first elephant. "Could you please tell us the way to the zoo restaurant?" The elephant couldn't think of anything intelligent to say, so he sort of shifted his weight from left to right. The first blind man walked over to see if this big silent person needed any help. Then, with a big bump, he walked right into the side of the elephant. He put out his arms to either side, but all he could feel was the big body of the elephant. "Boy," said the first blind man. "I think I must have walked into a wall." The second blind man was becoming more and more curious about what was happening. He walked over to the front of the elephant and grabbed hold of the animal's trunk.

He quickly let it go and shouted, "This isn't a wall. This is a snake! We should step back in case it's poisonous." The third man quickly decided to find out what was going on, and to tell his friends what they had walked into. He walked over to the back of the elephant and touched the animal's tail. "This is no wall, and this is no snake. You are both wrong once again. I know for sure that this is a rope."

The fourth man sighed as he knew how stubborn his friends could be. The fourth blind man decided that someone should really get to the bottom of this thing. So he crouched down on all fours and felt around the elephant's legs. Luckily for the fourth man, this elephant was very tame and wouldn't think of stepping on a human being. "My dear friends," explained the fourth man. "This is no wall and this is no snake. This is no rope either. What we have here, gentlemen, is four tree trunks. That's it. Case closed."

The fifth blind man was not so quick to jump to conclusions. He walked up to the front of the elephant and felt the animal's two long tusks. "It seems to me that this object is made up of two swords," said the fifth man. "What I am holding is long and curved and sharp at the end. I am not sure what this could be, but maybe our sixth friend could help us." The sixth blind man scratched his head and thought and thought. He was the one who really was the wisest of all of them. He was the one who really knew what he knew, and knew what he didn't know. Just then the worried zoo-keeper walked by. "Hi there! How are you enjoying the zoo today?" she asked them all. "The zoo is very nice," replied the sixth blind man. "Perhaps you could help us figure out the answer to a question that's been puzzling us." "Sure thing," said the zoo-keeper, as she firmly grabbed the elephant's collar.

"My friends and I can't seem to figure out what this thing in front of us is. One of us thinks it's a wall; one thinks it's a snake; one thinks it's a rope, and one thinks it's four tree trunks. How can one thing seem so different to five different people?" "Well," said the zoo-keeper. "You are all right. This elephant seems like something different to each one of you. And the only way to know what this thing really is- is to do exactly what you have done. Only by sharing what each of you knows can you possibly reach a true understanding." The six wise men had to agree with the wisdom of the zoo-keeper. The first five of them had been too quick to form an opinion without listening to what the others had to say. So they all went off to the zoo restaurant and had a really hearty lunch.

(i) Answer the following questions briefly.

(a) How were the six blind men able to read the books?

.....

.....

.....

.....

(b) Why was the zoo-keeper worried?

.....

.....

.....

.....

(c) What kind of animals are elephants?

.....

.....

.....

.....

(d) How did two elephants go out of the cage?

.....

.....

.....

.....

(ii) Fill in the blanks to complete the sentences taking information from the passage.

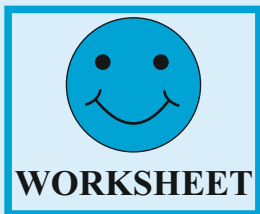

(a) The first man took the elephant to be a.....

(b) The second man thought the elephant's trunk to be a.....and suggested that they.....

(c) The fourth man closed the case saying that.....

(d) The zoo keeper suggested the six men to.....
.....to reach a new understanding.

(e) Finally, the six men came to know that it.....

6. Read the poem given below carefully and answer the questions that follow.

*Everyone that flatters thee
Is no friend in misery.
Words are easy like the wind;
Faithful friends are hard to find.*

*Everyman will be thy friend
Whilst thou has wherewith to spend
But if store of crowns be scant
No man shall supply thy want.*

*If that one be prodigal
Bountiful they will him call,
And with such like flattering,
'Pity but he were a king.'*

*But if fortune once do frown
Then farewell his great renown:
They that fawn'd on him before
Use his company no more.*

*He that is thy friend indeed
He will help thee in thy need;
If thou sorrow, he will weep;
If thou wake, he cannot sleep.*

*Thus of every grief in heart
He with thee doth bear a part,
These are certain signs to know
Faithful friend from flattering foe.*

William Shakespeare

(i) Match the words given in column-A with their meanings in column-B

Column -A	Column -B
1. flatterer	bad or difficult time
2. wherewith	not enough
3. bountiful	popularity
4. renown	your
5. thy	money
6. misery	generous
7. scant	A person who says nice things about you only to please you

1.
2.
3.
4.
5.
6.
7.

(ii) Complete the following sentences.

- (a) Everyone is your friend when you have.....
- (b) Your fame will say goodbye to you when.....
- (c) A true friend shares.....
- (d) A true friend cannot sleep when you.....
- (e) A true friend will help you

(iii) Write the rhyme scheme of the poem.

.....

(iv) Name the poetic device used in the line, 'Words are easy like the wind' .

.....

(v) Name the poetic device used in the line, 'But if fortune once do frown'.

7. Read the poem given below carefully and answer the questions that follow.

If

*If you can keep your head when all about you
Are losing theirs and blaming it on you,
If you can trust yourself when all men doubt you,
But make allowance for their doubting too;
If you can wait and not be tired by waiting,
Or being lied about, don't deal in lies,
Or being hated, don't give way to hating,
And yet don't look too good, nor talk too wise.*

*If you can dream-and not make dreams your master;
If you can think-and not make thought your aim;
If you can meet with Triumph and Disaster
And treat those two imposters just the same;
If you can bear to hear the truth you've spoken
Twisted by knaves to make a trap for fools,
Or watch the things you gave your life to, broken,
And stoop and build them up with worn-out tools.*

*If you can make one heap of all your winnings
And risk it on one turn of pitch-and-toss,
And lose, and start again at your beginnings
And never breathe a word about your loss;
If you can force your heart and nerve and sinew
To serve your turn long after they are gone,
And so hold on when there is nothing in you
Except the Will which says to them: 'Hold on!'*

*If you can talk with crowds and keep your virtue,
Or walk with kings-nor lose the common touch,
If neither foes nor loving friends can hurt you,
If all men count with you, but none too much;
If you can fill the unforgiving minute
With sixty seconds' worth of distance run,
Yours is the earth and everything that's in it,
And-which is more-you'll be a Man, my son.*

Rudyard Kipling

(i) Find words from the poem which mean the same as the following:

- (a) remain calm and cool.....
- (b) allow someone to behave in a particular way due to some reason.....
- (c) keep your self respect and good qualities.....
- (d) ability to get along with ordinary people.....

(ii) Choose the answers that best explain these lines from the poem.

(A) “If you can keep your head when all about you

Are losing theirs and blaming it on you,”

- (a) Stay relaxed when everyone else is angry, disappointed or confused.
- (b) Blame others when things go wrong.
- © Be alive and safe when people cut one another's head.

(B) “If you can think-and not make thought your aim;”

- (a) Plan and be satisfied with planning.
- (b) Plan and put your plans into action.
- (c) Plan and ask other to act accordingly.

(C) “Or watch the things you gave your life to, broken,

And stoop and build them up with worn-out tools.”

- (a) You almost die building something; it breaks; you cannot build anymore.
- (b) Something breaks and falls on you; you are bent down and cannot pick up your tools.
- © You achieve something in life; you lose it; you achieve it again though you are tired.

(D) The minute is unforgiving because

- (a) Once it is past, it is gone forever.
- (b) Minute does not forgive people who make mistakes
- (c) Minute never makes mistakes

(iii) Answer the following questions briefly.

(a) How should one deal with winning and losing?

.....

.....

(b) What do knaves do with the truth?

.....

.....

(c) What should we do if we lose all our winnings?

*In One salutation to thee, my God,
Let all my senses spread out
And touch this world at thy feet.
Like a rain-cloud of July
Hung low with its burden of unshed showers
Let all my mind bend down at thy door
In one salutation to thee.
Let all my songs gather together their diverse strains
Into a single current and flow to a sea of silence
In one salutation to thee.
Like a flock of homesick cranes
Flying night and day back to their mountain nests
Let all my life take its voyage to its eternal home
In one salutation to thee.*

Rabindra Nath Tagore

(i) Read the following sentences carefully and fill in the blanks with suitable words according to the ideas expressed in the poem:

- (i) The poet wants to spread all his senses insalutation to.....
- (ii) He wants his senses to.....this world at His.....
- (iii) The rain-cloud of July is loaded with.....
- (iv) The poet wants his musical strains to converge into
- (v) The poet compares his life to a.....of
.....
